

Section 9.5: Table 9.5.4. Long-term review
International association meetings 1854-2016

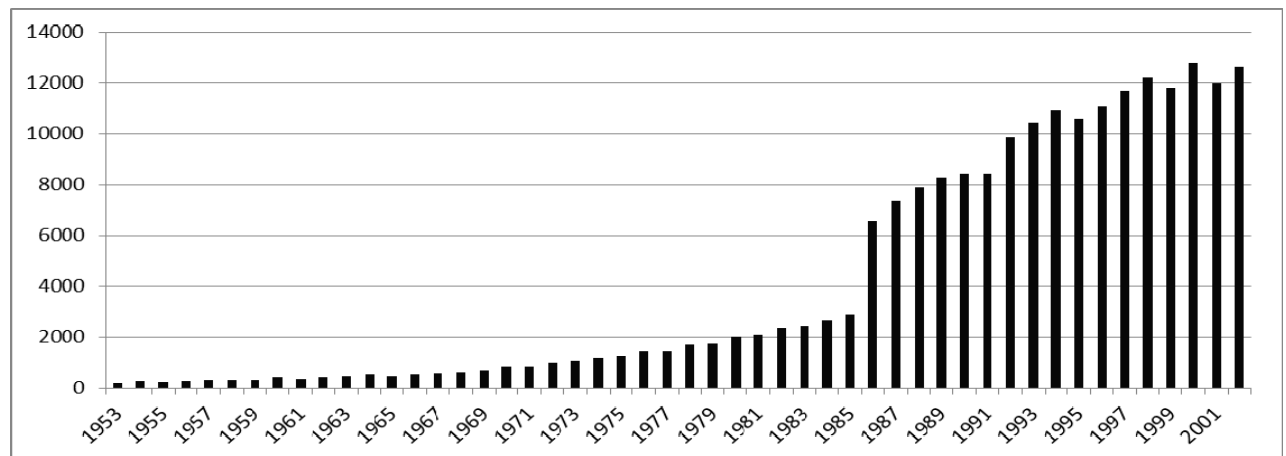

These charts show the number of international association meetings of type A over time. Note that each chart has a different scale on the Y axis: number of meetings.

The notes and caveats of Table 9.5.3. also apply here.

From 1854 to 1953 (100 years)

From 1953 to 2002 (50 years)

From 2002-2016 (15 years)

Caveat: It should be remembered that the number of meetings in the database for the current reporting year will, on average, increase by about 11% over the next year, and by about 32% over the following five years.
